FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

Digest

July-March agricultural exports amounted to $3,665 million in fiscal year 1962-63, 3 percent less than a year earlier, when exports totaled $3,786 million. Adverse effects of the longshoremen's strike from late December to late January were mostly compensated for in February and March. During the first 9 months this year less cotton, wheat (including flour), tobacco, poultry products, and inedible tallow and greases moved into export than last year. Leading gainers were feed grains, rice, oilseeds and products, and vegetables and preparations.

* * * * * * *

From August 1962, when the European Common Market's variable-import-levy system was put into effect, through February 1963, agricultural exports to the Common Market area declined 10 percent, to $653 million from $724 million in 1961-62. Commodities subject to variable levies -- principally feed grains, wheat, wheat flour, and poultry meat -- were down 18 percent from last year. Feed grain shipments alone, however, were up 22 percent, reflecting poor crops in Italy and France and somewhat limited supplies from the major exporters. Exports of commodities not subject to variable levies were reduced 5 percent.

* * * * * * *

Agricultural imports for consumption totaled $2,594 million in July-February 1962-63 compared with $2,500 million a year earlier. Supplementary (partly competitive) commodities advanced to $1,454 million from $1,343 million in 1961-62, mainly because of larger purchases of dutiable cattle and boneless beef. Complementary (noncompetitive) commodities declined slightly, to $1,143 million from $1,157 million, mostly the result of lower prices.

Export Highlights

JULY 1962 - MARCH 1963

July-March agricultural exports in 1962-63 -- 3 percent below the level of the like period a year earlier -- totaled $3,665 million compared with $3,786 million in 1961-62. Indications are that exports for the fiscal year, as a whole, will not be adversely affected by the longshoremen's strike. Larger shipments in February and March compensated for most of the loss due to the strike. Less cotton, wheat (including flour), tobacco, poultry products, and inedible tallow and greases moved into export this fiscal year. Leading gainers over last year were feed grains, rice, oilseeds and products, and vegetables and preparations. (Table 1.)

Foreign developments had a substantial influence on the level of U.S. agricultural exports during the July-March period. The increase in foreign free world cotton exports and a slowdown in consumption of textile products caused U.S. cotton exports to drop precipitously. A large increase in world wheat production pulled U.S. wheat exports down from the previous year's record. The United Kingdom's unemployment and balance of payments problems figured prominently in this important market's takings of U.S. agricultural products the past 2 years. The European Economic Community's Common Agricultural Policy -- employing a system of variable import levies -- sharply lowered imports of U.S. products, especially poultry meat, wheat flour, and to some extent wheat. On the other hand, exports to Japan continued to expand as the result of an improvement in balance of payments. And trade with Canada likely will not be adversely affected this year by the surtax on imports or the devaluation of the Canadian dollar.

U.S. agricultural exports to the European Economic Community since the inception of the Common Agricultural Policy system of variable import levies declined 10 percent from the year-ago level. The August-February 1962-63 total was $653 million compared with $724 million in 1961-62. (See table 2.) Variable-levy commodities were down 18 percent, principally wheat flour, wheat, and poultry meat. But among the variable levy commodities, exports of feed grains were up 22 percent, reflecting trade liberalization in Italy, poor crops in Italy and France, and somewhat limited supplies from other major exporters.

Imports of nonvariable levy commodities were down 5 percent, reflecting mainly sharp declines in cotton, tallow, tobacco, rice, and vegetable oils. However, substantial increases occurred in fruits, vegetables, and soybeans.

Animals and animal products. Exports of animals and animal products in July-March 1962-63 were 8 percent below a year earlier. They totaled $425 million compared with the previous year's $460 million. The substantial decline in

2/ Excludes Title III, P.L. 480 donations, which are included in "Other" agricultural exports.

exports of tallow -- mainly to Italy and Japan -- dominated the decline. Exports of poultry products to the European Economic Community -- mainly poultry meat -- were down considerably because the imposition of the variable import levy on poultry meat increased the EEC import cost from $4\frac{1}{2}$ to $12\frac{1}{2}$ cents per pound. Exports of ghee and butter for relief and charity ran close to the levels of last year.

Cotton. Exports of cotton, excluding linters, totaled 2.8 million running bales in July-March 1962-63 compared with 3.7 million a year earlier. Exports were slowed this year by the substantial increase in foreign production and a

1/ Exports of wheat flour include $6,054,000 in 1962-63 and $6,184,000 in 1961-62 to Italy under Title II of P.L. 480 for Italy's school lunch program.

2/ Although pork is a variable-levy commodity, the imposition of the levy on pork variety meats -- the kind exported by the United States -- has been postponed.

drop in foreign consumption. The principal manufacturing countries have been relying on stocks for heavier-than-normal amounts. Exports of cotton for the rest of the fiscal year will continue to move at a low rate. Exports are likely to pick up somewhat following the new program scheduled to go into effect for the marketing year beginning August 1, 1963. Cotton registered for export under the export payment program totaled 3 million bales as of May 10 compared with 4.2 million bales a year earlier.

Grains and preparations. Among the grains and preparations, exports of wheat and flour totaled 423 million bushels in July-March 1962-63 compared with a record 535 million in the like period a year earlier. Exports are smaller this year because of the large world crops in both the major and minor exporting and importing countries. Western Europe had a particularly good wheat crop last year. Wheat exports are expected to pick up somewhat in the coming months under Government-financed programs, mainly Title I, P.L. 480, sales for foreign currency. July-March dollar sales are estimated at 115 million bushels compared with 163 million in 1961-62. Japan has become the largest foreign dollar market for U.S. wheat.

Exports of feed grains totaled 10.5 million metric tons in July-March, nearly 1 million above the same period a year earlier. There was a substantial increase in feed grains going to the European Economic Community, reflecting the poor crops in Italy and France and smaller availabilities of grains from other major exporting countries. In addition, Italy's trade liberalization measures also stimulated U.S. feed grain exports to that country. In previous years, Italy had bilateral arrangements for the purchase of most feed grain imports and bought much from Argentina.

Exports of rice were nearly one-third above a year earlier. They totaled 17.8 million bags (milled basis) in July-March 1962-63 compared with the previous year's 9-month total of 14 million. More has been going to Indonesia, India, and Africa. About 60 percent of the rice exports in the July-March period moved under Government-financed programs.

Fruits and preparations. Exports in July-March were slightly below the level of a year earlier. This was due to a drop in shipments of dried fruits, reflecting reduced U.S. raisin output, and fresh apples resulting from improved European output. Exports of oranges were lower because of freeze damage. However, more canned peaches and fruit cocktail moved out.

Oilseeds and products. Exports of oilseeds and products in July-March were over one-fourth above the level for the same months a year earlier. The increase reflected larger exports of soybeans, protein meal, and soybean oil. Exports of oilseed products have been benefiting from the substantial increase in foreign demand for vegetable oils and protein meal, especially in the industrialized countries of Europe and Japan. The United States ships about one-third of the vegetable oil entering world trade. Foreign production has not been able to maintain its share of the world trade in vegetable oils and products. This year the United States has been benefiting from the poor olive crop in the Mediterranean Basin, the increased demand for protein meal in Western Europe, and the continued small availabilities of soybeans for export from Communist China. U.S. soybean exports totaled 129 million bushels compared with 111 million a year earlier. Importers in Western Europe have gradually increased soybean imports over oils to secure the byproduct protein meal, much needed by the livestock industry. Japan continued to be the best foreign outlet for U.S. soybeans, taking 70 million bushels in July-March of fiscal year 1962-63. Japan used about two-thirds of the U.S. beans imported for oil and meal and one-third for food products. More and more soybean shipments to Japan are being crushed for oil and the byproduct protein meal.

Exports of vegetable oils totaled 1,144 million pounds in July-March compared with 716 million in the like period a year earlier. A substantial part of the increase was in Government-financed programs, especially Title I of P.L. 480. In addition, Spain took more soybean oil for dollars because of a poor olive crop; Spain found it more profitable to import soybean oil and export olives and olive oil.

Exports of protein meal surpassed last year's record, totaling 1.2 million short tons in July-March this year compared with 0.7 million a year earlier. Most of the protein meal went to Western Europe, where demand for high-protein feed is strong.

Tobacco. Exports of unmanufactured tobacco totaled 372 million pounds (export weight) in July-March 1962-63 compared with 421 million a year earlier. The 12-percent decline reflected mainly the larger-than-normal poor-quality crop of 1962. Exports were down sharply to the European Economic Community and the United Kingdom; importers there relied more on stocks than in the prior year. In addition, exports met increased competition from other major producers, especially Rhodesia-Nyasaland. This year European production was not damaged as much by blue-mold disease as in past years, when larger exports from the United States were required to make up for some of the lower production in the Common Market area. Exports of tobacco were larger under Government-financed programs, mainly Title I of P.L. 480. Title I shipments totaled 35.0 million pounds in July-March 1962-63 compared with 29.3 million for the same 9 months a year earlier.

Vegetables and preparations. Exports of vegetables and preparations in July-March of 1962-63 ran 30 percent above the same period a year earlier. Dry edible beans and peas were the major gainers, with the beans going to Western Europe and Latin America and the peas to Europe because of reduced crops. Bean output was hit particularly in the Danube Basin, which supplies Europe with most of the beans it uses. In recent months, sharply increased exports of fresh vegetables to Western Europe were needed to supplement the reduced output as a result of the severe winter. Major increases were in potatoes and onions. February exports of white potatoes were 61 million pounds larger this year than last.

Import Highlights

JULY 1962 - FEBRUARY 1963

U.S. agricultural imports for consumption totaled $2,594 million in July-February 1962-63 compared with $2,500 million a year earlier. Imports this year included increases in supplementary (partially competitive) items, while complementary (noncompetitive) imports declined slightly. (See table 3.) Nonagricultural items rose to $8,186 million from $7,627 million a year earlier.

For the year as a whole, agricultural imports are not expected to change appreciably from the 1961-62 level of $3,767 million. Agricultural imports have trended downward since the early 1950's, while nonagricultural imports generally advanced. The relatively inelastic U.S. demand for foreign agricultural products against a background of increased foreign production pushed down prices for a number of commodities, especially coffee and cocoa.

U.S. agricultural imports slowed somewhat in January because of the longshoremen's strike. Imports were larger prior to January in anticipation of the strike. February imports were sharply higher, compensating for most of the loss due to the strike.

Supplementary Imports

July-February supplementary imports increased to $1,454 million in 1962-63 from $1,343 million in 1961-62. This increase stemmed mainly from larger purchases of dutiable cattle, and meat and meat products, especially boneless beef. Sharply larger imports of boneless beef for manufacturing purposes reflected the continuing reduced U.S. production of low-grade meat for such uses. In addition, there was a substantial rise in demand for meat products such as prepared hamburgers, luncheon meats, and frankfurters.

Imports of apparel wool increased to 133 million pounds (actual weight) from 104 million in July-February last year. The low level of stocks in the United States and increased mill activity stimulated imports of apparel wool in 1962-63.

Imports of grains and preparations, mainly malting barley, were down sharply this July-February from a year earlier. Last year much malting barley was brought in from Canada to supplement relatively low domestic supplies. Other grains, such as corn, rye, and rice, also lagged behind a year ago.

Table 3.--U.S. agricultural imports for consumption: Value by commodity, July-February 1961-62 and 1962-63

Other	116	113	- 3
Total complementary	1,157	1,141	- 1
Total imports	2,500	2,594	+ 4

Imports of vegetable oils during the July-February period of 1962-63 were up slightly from the like period a year earlier, reflecting mainly larger imports of coconut oil. Imports of coconut oil have been increasing in recent years more than imports of copra. Most producing countries prefer to ship coconut oil to the United States to retain the byproduct meal for domestic feed use.

Imports of copra, mostly from the Philippines, the principal supplier, fell to 464 million pounds in July-February 1962-63 from 541 million a year earlier. A substantial increase in demand for protein meal in other industrialized countries, such as Japan and those in Western Europe, sharply limited the amount that could be imported into the United States.

July-February imports of cane sugar totaled 3.1 million short tons (tel quel basis) compared with 2.7 million a year earlier. Most of this sugar came from Latin America and the Philippines.

Complementary Imports

July-February imports of complementary products amounted to $1,141 million in 1962-63 compared with $1,157 million for the same 8 months a year earlier. The decline reflected mostly lower prices. Imports of tea and spices were larger in both quantity and value. Imports of coffee increased in quantity but declined slightly in value. For carpet wool, volume increased to 132 million pounds from 129 million a year earlier, while value fell to $63 million from $67 million.

Lower prices evidenced in the declining import values for complementary imports reflect expanded production and carryover. Consumer demand for such products as coffee, cocoa, and tea is highly inelastic, and prices decline sharply when production and supplies are unusually large Complementary products now account for slightly over two-fifths of U.S. agricultural imports, but several years ago they made up over half of the total.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and in-transit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than $100 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 87-195 (Act for International Development), principally sales for foreign currency; under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at time of shipments from the United States, to which the commodities are to be shipped in their present form. Export shipments valued $100-$499 are included on the basis of sampling estimates.

IMPORTS Imports for consumption consist of commodities released from U.S. Customs custody upon arrival, or entered into bonded manufacturing warehouse, or withdrawn from bonded storage warehouse for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
